You will be automatically enrolled in the “Working with the IACUC” AALAS course. To access the course select “ASSIGNMENTS” in the right-hand corner of the screen and a drop-down menu will appear with the course option. Click on the “Working with the UT Knoxville IACUC” link to continue.

Click the “Start” button to begin.

Click the “Next” button to navigate through the lesson.

WORKING WITH THE IACUC

Lesson 1: Introduction

Course Introduction

Welcome to the "Working with the IACUC" (formerly Working with the IACUC: Non-VA version) course. This course is designed primarily for staff performing research that involves the use of laboratory animals and for IACUC members, but veterinarians, senior husbandry staff and anyone interested in learning more about how animal research must be conducted will likely find the course materials useful as well.

This course was funded by the VA Office of Research and Development as part of the "Working with Laboratory Animals" instructional series, with production assistance by the VA Employee Education Service.

To see complete course credits and acknowledgments for photos used, [click here](#).

WORKING WITH THE IACUC

Lesson 2: Working with the IACUC

The IACUC

By law, an institutional committee must review all aspects of the animal care and use program. This committee is most commonly referred to as the "Institutional Animal Care and Use Committee," or IACUC. Your institution may call it by another name, but the mission and role are the same.

Your institution probably has its own IACUC, but smaller institutions sometimes use the IACUC of an affiliate instead of having one of its own. Check with research administrators to make sure you know where to submit your animal protocol forms.

There are at least three people you should get to know when you are planning work with laboratory animals.

- The first is the IACUC chairperson or alternately, the IACUC executive secretary or director. The IACUC is an invaluable source of information to help you obtain approval for your planned experiments.
- The second is an institutional veterinarian (who may also be the attending veterinarian), who can help you plan experiments and provide medical and procedural guidance.
- The third is the vivarium supervisor or animal facility manager, who can help you make arrangements to order and house animals after you receive IACUC approval.
